

Hisinger Gletscher

I bunden af Dickson Fjord ligger den pragtfulde og ca. 2 km brede Hisinger Gletscher, opkaldt efter den svenske videnskabsmand Wilhelm Hisinger, der var med til at opdage grundstoffet cerium.

At the head of the Dickson Fjord lies the magnificent and approx. 2 km wide Hisinger glacier, named after the Swedish scientist Wilhelm Hisinger, who was involved in discovering the element cerium.
